

## Energy Committee Chair - Agenda Proposal

*Name of the Candidate: Maja Turković*  
*Company of the Candidate: CWP Europe*

During my first term as Chair of the Energy Committee, the Committee worked with:

- the Government of Serbia and other important stakeholders to improve the business environment for diversification of energy supply, modernization of regulatory framework and enhancement of legal certainty,
- the other members to enhance self-supply of green energy and the modalities of purchasing green electricity through corporate power purchase agreements (PPAs)
- the European Commission to understand, and where possible improve EU regulations, in facilitating compliance with CBAM.

I am seeking your support to continue the work we have started two years ago, addressing the same stakeholders with the following agenda:

1. **CBAM preparedness enhancement** - facilitate CBAM related regulatory changes locally to facilitate Serbian business community's compliance and maintenance of overall competitiveness.
2. **Facilitate implementation of green electricity purchasing mechanisms** aimed at decreasing short term electricity price volatility, while fulfilling carbon neutral corporate targets and ESG policies.
3. **Improve business environment for energy related investments** to help create a transparent and predictable regulatory and administrative framework.
4. **Facilitate introduction of new electricity market design**, as a precondition for market coupling with the EU, effecting opening of the ancillary services market (enabling the business case for battery storage), aggregators and virtual power plants, allowing for the concept of negative electricity prices.
5. **Learning more about digital and green energy nexus**, which includes increasing usage of machine learning and AI to further optimize renewable energy assets, and foster cooperation between different industries.
